

# Exciting Career Opportunities in Wild Animal Health & Wild Animal Biology

**Find out more about postgraduate study in Wild Animal Health and Wild Animal Biology.**

One year full time study starting each Autumn, leading to an MSc qualification from the University of London.

MSc Wild Animal Health applicants require a first degree from a recognised veterinary school and learn alongside experts in the field, to acquire knowledge and skills in wild animal management and the epidemiology, treatment and control of disease.

MSc Wild Animal Biology applicants require a first degree in Biology or Zoology. Participants acquire an understanding of wild animal health and welfare through practical exposure and receive training in relevant research methodologies.

As our courses are popular, we recommend application no later than the end of March each year for Autumn start date.
